If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 03/07/2011 been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 03/07/2011 was filed after the Notice of Allowance mailed on 12/09/2010. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Rodack on 06/25/2010.

4. The application has been amended as follows:

In **claim 23**, line 10, "sufficiency of processing resources." has been changed to
- - sufficiency of processing resources;

further comprising a multiplexer, wherein the encoder is further configured to:
receive, in parallel to the plural digitized pictures, second plural digitized pictures of a second picture sequence and compressed pictures, the received pictures corresponding to a first format; and

further compress, in parallel to the plural digitized pictures of the picture sequence, the second plural digitized pictures of the second picture sequence to produce, in association with the multiplexer, a transport stream comprising a multiplex of the video stream and the compressed second plural digitized pictures, the transport stream pictures corresponding to a second format different than the first.- -

Cancel **claim 62**.

In **claim 63**, line 1, "The STT of claim 62" has been changed to - - The STT of claim 23 - -.

Art Unit: 2423

In **claim 65**, line 1, "The STT of claim 62" has been changed to - - The STT of claim 23 - -.

In **claim 68**, line 1, "The STT of claim 62" has been changed to - - The STT of claim 23 - -.

Allowable Subject Matter

5. Claims 1, 2, 5, 7-9, 12, 17-19, 21-25, 41-47, 51-61 and 63-68 are allowed.

Regarding **claim 1**, the applicant's arguments filed on the appeal brief of 04/19/2010 are persuasive. Furthermore, the examiner notes that the multiplexing and demultiplexing scheme of Artigas et al. (Pub No US 2001/0014206) is implemented by a magnetic recording head composed of a matrix which physically multiplexes data on the recording tape in parallel locations of the recording tape, which is different than parallel encoding and multiplexing video into a transport stream (i.e. MPEG-2).

The examiner examined IDS submitted on 10/21/2010 and notes that the multiplexing of commonly assigned application Nallur et al. (Pub No US 2005/0022245) takes place between the compressed audio and video content of the same video program, see paragraph [0041]. While paragraph [0042] does describe the compression and multiplexing of a plurality of videos to their corresponding audio stream in parallel, Nallur still fails to disclose or reasonably suggest "a multiplex of a corresponding first

Art Unit: 2423

compressed video stream and a second compressed video stream, respectively". Since, Nallur only teaches that the audio and video content from the same program are multiplexed with each other, unlike the allowable feature of the current application which multiplexes two compressed video streams, respectively.

The examiner examined the IDS submitted on 03/07/2011 and notes that the cited references and the prior art of record still fail to show or reasonably suggest encoding in parallel plural digitized pictures of a first picture sequence corresponding to a first video stream of the plural received video streams and a second picture sequence corresponding to a second video stream of the plural received video streams to produce a transport stream comprising "a multiplex of a corresponding first compressed video stream and a second compressed video stream, respectively", the first and second video streams having the first format and the first and second compressed video streams having the second format, in combination with all the other limitations presented in claim 1. Therefore, independent claim 1 is allowable.

Regarding dependent **claims 2, 5, 7-9, 12, 17-19, 21, 22 and 56 - 61**, they are also held allowable since they depend from allowable claim 1.

Regarding **claim 23**, the applicant's arguments filed on the appeal brief of 04/19/2010 are persuasive. Furthermore, the examiner notes that the multiplexing and demultiplexing scheme of Artigas et al. (Pub No US 2001/0014206) is implemented by a magnetic recording head composed of a matrix which physically multiplexes data on the recording tape in parallel locations of the recording tape, which is different than parallel encoding and multiplexing video into a transport stream (i.e. MPEG-2).

The examiner examined IDS submitted on 10/21/2010 and notes that the multiplexing of commonly assigned application Nallur et al. (Pub No US 2005/0022245) takes place between the compressed audio and video content of the same video program, see paragraph [0041]. While paragraph [0042] does describe the compression and multiplexing of a plurality of videos in parallel, Nallur still fails to disclose or reasonably suggest "a multiplex of a corresponding first compressed video stream and a second compressed video stream, respectively". Since, Nallur only teaches that the audio and video content from the same program are multiplexed with each other, unlike the allowable feature of the current application which multiplexes two compressed video streams respectively.

The examiner examined IDS submitted on 03/07/2011 and notes that the cited references and the prior art of record still fail to show or reasonably suggest a multiplexer, wherein the encoder is further configured to: receive, in parallel to the plural digitized pictures, second plural digitized pictures of a second picture sequence and compressed pictures, the received pictures corresponding to a first format; and further compress, in parallel to the plural digitized pictures of the picture sequence, the second

Art Unit: 2423

plural digitized pictures of the second picture sequence “to produce, in association with the multiplexer, a transport stream comprising a multiplex of the video stream and the compressed second plural digitized pictures”, the transport stream pictures corresponding to a second format different than the first, in combination with all the other limitations presented in claim 23. Therefore, independent claim 23 is allowable.

Regarding dependent **claims 24, 25, 41-47, 51-55 and 63-68**, they are also held allowable since they depend from allowable claim 23.
